

# Power BI Training FAQs FAQs

For more specifics about how our Power BI Training supports your enterprise, read through these FAQs.

## Who can benefit from Power BI training?

Our Power BI trainings are most effective for individuals who already have analysis experience, whether that is in finance, business intelligence, or another field. They may already have experience with Excel or other solutions within the Microsoft data stack, but have not yet had any formal Power BI training.

## What does the Power BI Foundations Training entail?

The Power BI Foundations Training is our most popular training at Collectiv. It's a two-day or three-day training that teaches attendees how to build a Power BI report from start to finish. Through presentations and working sessions, attendees learn how to build data models, calculations, and visualizations. Most importantly, every attendee will walk away from the Foundations Training with the ability to implement Power BI in your organization.

## Do I need any Power BI experience to attend these trainings?

While Power BI experience isn't necessary for the Foundations Training, it's helpful to have some previous knowledge of data analytics. For the Advanced Training, attendees should have intermediate or advanced Power BI skills.

## What will I learn in these trainings?

The Foundations Training covers the basics and best practices of Power BI. This starts with Power Query input and building out your data model, and then moves on to more complex calculations and visualization best practices to create effective and cohesive reports. The Advanced Training covers more advanced techniques, including data modeling and Power Query, advanced DAX, as well as visualization best practices.

## How many users can attend these trainings?

Collectiv's training programs are designed for a maximum of 15 participants to ensure that our team is able to provide personal attention and support for each of the attendees. If you have more than 15 team members who need training, our team is happy to lead multiple training sessions to help everybody learn.
