

Visioning FAQs FAQs

For more specifics about how Visioning supports your enterprise, read through these FAQs.

What do I get from the Visioning Program?

At the end of Collectiv's Visioning Program, you will receive a strategic roadmap for your organization to move forward. This roadmap details all of the technology and best practices you will need to implement to solve your existing challenges and achieve your future goals. The roadmap typically covers the next three years, but it can cover anywhere from one to five years—depending on what your organization needs.

How long does the Visioning Program take?

The Visioning Program can take anywhere from four weeks to six months, depending on your enterprise team's availability. For busier teams, the program takes longer to complete. But, if everyone is available, we can move faster together.

How much does the Visioning Program cost?

The Visioning Program starts at \$25,000. Costs vary depending on the complexity of your organization and its unique needs.

What is the value of Visioning?

Collectiv's Visioning Program takes you from stagnation to progress. At Collectiv, we've worked with enterprises across a wide range of industries to develop unique data solutions that generate results. With Visioning, we take a holistic look at your organization to find solutions and create a strategy that you might not be able to develop on your own.

What are some ways your clients use Visioning?

Visioning addresses so many different facets of our clients' data initiatives, from implementing a BI initiative within a specific department (i.e. finance, HR) to enterprise-wide adoption and governance. We also help clients roll out their programs with the right level of governance and oversight to optimize adoption.

Our Visioning Program supports product development initiatives as well. For example, we helped an enterprise strategize a project to build a SaaS reporting offering on top of Power BI and within the Microsoft data stack to sell to their customers.

We defined the architecture they needed by pulling together elements from Power BI and Azure. We talked to many engineers in the organization about the nuts and bolts of each system, then created a blueprint that detailed how they could build on their existing infrastructure and bring the product to market most cost-effectively.

The versatility of the Visioning Program means you can zoom in on a specific project or zoomout to get a long-term strategy while building confidence that you're addressing every aspect of key BI initiatives.

Reach out to move forward: www.gocollectiv.com

Collectiv is the top-rated Power BI consulting and strategy firm that empowers BI success through real-world experience and deep technical expertise across the Microsoft data stack.
